

On Track with the Future of Coal

For the past 25 years, the American Coal Council has been dedicated to advancing the development and utilization of coal as an economic, abundant and environmentally sound fuel source.

BNSF both applauds and supports that effort.

Over the past 25 years, BNSF has moved nearly 5 billion tons of coal. And as our nation's demand for an environmentally friendly, domestic energy source continues to grow, BNSF is delivering more coal than ever. BNSF has set annual coal tonnage records for each of the past three years. In 2006, BNSF delivered 287.2 million tons, up 10.8 percent from the previous annual record of 259.2 million tons set in 2005.

To accommodate this growth, in 2006 and 2007, BNSF has committed more than \$1.24 billion for coal capacity expansion.

BNSF is proud to be a partner in the energy supply chain for one of America's most abundant and important natural resources.

BNSF and ACC: Working together to power America.
